

# CRAVE BROTHERS DAIRY [BLOG COMMENT]

The site *farmersguide.com* is an online platform where American farmers post to share their way of farming. This is what a dairy farmer from Gooding, Idaho wrote:

**by** Glenn Hunter  
March 3, 10:20

I don't know about you folks, but there are months when I get a shock when I open the electric bill. It's all a mess! We really do use a lot of electricity in our homes but as a producer of cheese, the bills really keep piling up. I've already thought about producing my own energy, but I don't have enough experience and / or knowledge in doing so. I simply don't know if this could be a valuable investment.

By the way, we focus on white cheddar. Our annual output is about a thousand pounds. We create our award winning cheese in small, handmade batches to ensure the finest quality and richest taste. The milk we use is from our own herd of Jersey cows.

You are George Crave, owner of Crave Brothers Dairy in Waterloo, Wisconsin. You have decided to reply to Glenn.

In your **informal blog comment** you should:

- describe your company and its products
- explain your way of solving the energy problem
- convince Glenn to convert to "green energy"

Write about **200 words**.
